Outlines

- Searching Techniques
- Electronic mail (E-Mail)

Edit with WPS Office

- A search engine is a collection of information about material published on the World Wide Web (WWW).
- This information is then “indexed” and put into “categories.
- Every search engine has a search box where you type the “key words” that you want to search for.
- The results are categorized according to the search engines used as links.

Searching Techniques

- There are different techniques that enable you to carry out an effective search. Many search engines have an [Advanced] search option with suggestions on how you can narrow down your search.
  - **Singular/plural:**

  If you type singular word the engine is searching for both (singular and the plural of the word). If you type plural word The result is reduced the engine is searching for the plural only.

Edit with WPS Office

Cont…

- **Include/exclude words: searching by operator**
  - word1 –word2

The result is reduced.

The engine is searching [word1] and taking out references to [word2].

Tip: There is a space between the word1 and the minus symbol. The minus symbol is attached to the word2.

Edit with WPS Office

Cont...

- **word1 +word2**

  The result is reduced

  The engine is searching word1 and only including references to word2.

Edit with WPS Office

Cont...

- searching by keyword

  word1 and **word2** to search for those keywords.

  The number of results totals hundreds of thousands

  The engine is searching for every instance of the individual words [word1] and [word2].

Edit with WPS Office

Cont...

- Search by phrase:

  "word1 and word2"

  To search for those keywords

  The number of results is reduced

  The engine is searching for the keywords as a phrase

Edit with WPS Office

Cont…

- Search within a category:

  [“lesson plans and resources”, UK]

  The number of results is reduced

  The engine is searching for the phrase listed in the [UK] category.

  Tip: *Substitute your own localized search criteria*

Edit with WPS Office

Cont…
