Definition of network

- Networks means the technology and architecture used to interconnect communicating devices.
- A computer network is a collection of computers that are connected together to communicate with each other.

Edit with WPS Office

Components of network

1. A collection of computers:(at least two computers).
2. Connecters: that connect the computers to each other (wired or wireless).
3. Network Interface Card(NIC): is also known as a network card, its connects the computer to the cabling. Each computer on a network must have a network card.
4. Computer Server: controls the network access of the others computers in the network (clients).

Components of Network

Features of Networks

- **Flexible access**: allow users in the network to access their files from their computers.
- **Resource sharing and reduce cost:** resources (printers, scanners, ,,,etc.), the resources have to be define on each computer, can done only once on the computer server
- **Centralized software management:** all the software can be loaded on one computer can be accessed by other computer in the networks.
- **Speed** : a network is a method to transferring files in very short time.

Computer Medical Network System

- The computer based medical system is a locally controlled network that extends throughout all parts in a system.
- It allows specialized computers to access a wide variety of information sources: educational, clinical, financial, and administrative.

Edit with WPS Office

Cont…

- A computer based medical network system in hospital network :
  - Gathers patient-specific data from multiple sources.
  - Merges patient's data for ease of access by users.
  - Clinical data repositories, particularly if they do not yet contain the full range of information that would normally occur in a medical record, such as those illustrated in next figure

what is internet?

- The Internet is a world-wide electronic network that enables independent computer networks to connect together by using an Internet Protocol (IP).
- It allows easy access to a vast amount of information stored at many different sites around the world.

Edit with WPS Office

What is the internet used for?

Internet is used mainly for :

- Communication
- Obtaining Information
- Publishing
- Commerce and business
- On-line Learning.

Edit with WPS Office

What is the internet used for?

- People use the Internet for a variety of reasons:

Communicate

Research and Access Information

Shop

Bank and Invest

Online Trading

Entertainment

Download Videos

Share Information

Web Application

Internet Services

- The most widely used services on the Internet are:
  - **The World Wide Web (WWW):** It provides easy access to a vast range of information stored on computers all over the world.
  - **Electronic Mail (e-mail):** Allow people to send messages from one computer to another immediately.

Edit with WPS Office

Cont,,,

- **Newsgroups:** are discussion groups that focus on one particular subject.
- **Chat:** is a conversation session through internet.
- **Publishing:** you can publish your files on the World Wide Web.

Websites

- Website is a set of related web pages typically served from a web domain on internet.
- Most pages on website have links (hyperlinks). Links are often images or highlighted or underlined words(hypertext).
- A **website** is hosted on at least one web server, accessible through an Internet address known as **a uniform resource locator (URL)**.

Edit with WPS Office

Cont…

- A **Web Address** or **URL** consists of three parts:

  https//www – is short for hypertext transfer protocol and indicates the file is a Web page and is located on the World Wide Web.

  Domain Name – this is usually a company or product name, e.g. kcm

  Global Domain – Shows the type of organization using the address and may also indicate the country of origin, e.g. com, sd, uk, sa, net, edu, etc.

Edit with WPS Office

Cont…

- Common medical websites
  - http://www.netlibrary.com: contains a hundred e- free books
  - www.who.int : world health organization
  - www.startref.com\: contains a hundred of e-books
  - www.who.int/hinari: contains e-books, journals and papers.

Practical Part: General Environment of Mozilla Firefox Browser

Edit with WPS Office

- Opening your browser:
  - Click on the Start menu at the bottom left of the Windows desktop.
  - Click on Programs to open the programs menu.
- Locate and click on Mozilla FireFox.

Edit with WPS Office

- The web page that appears in your browser window when you first log onto the Internet is known as the **Home Page.** The home page contains the following items:
    - Title Bar
    - Menu Bar
    - Tool Bar
    - Address Bar
    - Status Bar
    - Command Bar.

  You can use the view menu from menu bar to show or hide all types of bars.
