MICROSOFT OFFICE WORD 2013 ENVIRONMENT

Edit with WPS Office

Outlines

- Word processing programs
- Advantages of using word processing programs
- General Terminologies of word processing programs
- Practical Part: General environment of Microsoft office Word 2013

Edit with WPS Office

Word Processing Programs

- Word processing programs are important tools for medical students to prepare their documents in a professional way.

Edit with WPS Office

Advantages of using word processing programs

- Ease of documents modifications
- Encourage revisions : errors corrections in grammar, spelling, and style.
- You can move an entire paragraph or words easily in your document.
- You can include a new paragraph or words at anyplace within your document

Edit with WPS Office

General terminologies in word processing programs

- **Document**: is a file that created using word processing program
- **Formatting**: means change the appearance of your text by change the font type or text or color of your text.
- **Scroll Bar**: to move up and down within a document.

Edit with WPS Office

Cont…

- **Alignment:** is a position of text in a page. And there are three alignment(left, centered, right)
- **Header:** is a top of page
- **Footer:** is a bottom of page.
- **Orientation:** is the direction in which a document is displayed. The two basic type of page orientation are portrait (for vertical direction) and landscape (for horizontal direction).

Edit with WPS Office

Cont…

- **Margins:** This is the space between the edge of your text and the edge of your page. Each margin may be increased or decreased.
- **Undo:** is a command that erases the last change done to the document reverting it to an older state.
- **Redo**: is a command that opposite of undo. It reverses the undo.
- **or on any o**ther document **Clipboard:** is temporary holding area the computer uses to hold copied or cut text to be pasted elsewhere in the document

Cont…

- There are many commands in word processing program to perform several tasks. We can use keyboard shortcuts to perform tasks by press CTRL key follows by letter. Some of these tasks are:

Edit with WPS Office

CTRL+A	Select all the text
CTRL+B	Make a text Bold
CTRL+C	Copy text
CTRL+S	Save word document
CTRL+O	Open an existing document
CTRL+P	Print word document
CTRL+V	Past the text
CTRL+X	Cut the text
CTRL+N	Create new word document
CTRL+W	Close word document
CTRL+Z	Undo a previous action

Practical Part: Microsoft Office Word 2013 environment

Edit with WPS Office

Microsoft Office Word 2013 environment

- The goal of the Microsoft Office working environment is to make working with Office documents, including Microsoft Word documents, Excel workbooks, PowerPoint presentations, Outlook email messages, and Access database tables, as intuitive as possible.

Edit with WPS Office

Microsoft Word

- Microsoft word 2013 is a word-processing program that is used to create professional-looking documents such as reports ,memos and newsletters. It includes many powerful tools that can be used to easily create and edit documents. And collaborate with others.
- This part covers how to perform basic tasks such as starting and exiting the program; creating; saving, opening, closing, editing, formatting and printing documents: applying styles and getting help.

Home Tab > Formatting document

Formatting Text

Text formatting includes font, font size, font color, and font style and effect. The *Font* group on the *Home* tab of the *Ribbon* contains the most commonly used text formatting commands (see Figure 21). You can also format text using the *Font* dialog box which can be opened by clicking the dialog box launcher in the *Font* group.

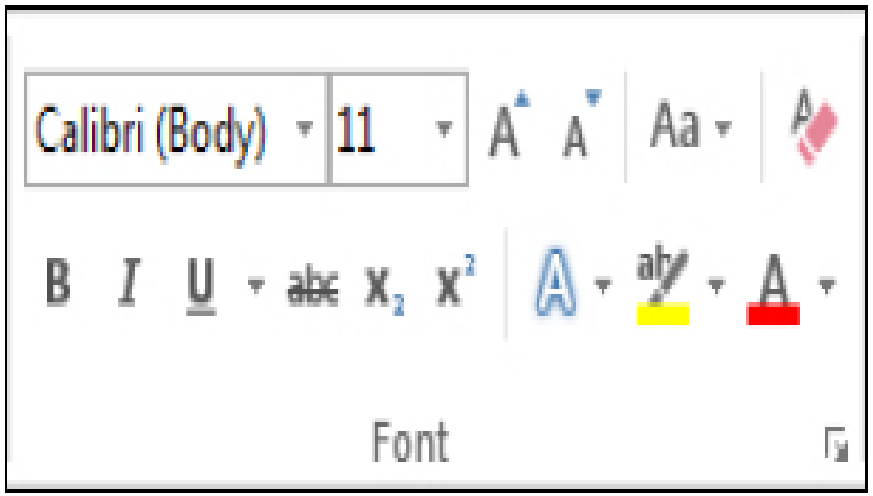

Figure 21 – Font Group on the Home Tab

Edit with WPS Office

Changing the Font and Font Size

A font defines the overall appearance or style of text lettering. Font size controls the height of the font. The default font in new Word 2013 documents is Calibri; the default font size is 11 points.

To change the font:

1. Select the text that you want to format.
2. On the **Home** tab, in the **Font** group, click the **Font** arrow and select the desired font from the list (see Figure 22).

To change the font size:

1. Select the text that you want to format.
2. On the **Home** tab, in the **Font** group, click the **Font Size** arrow and select the desired font size from the list (see Figure 23). If a font size you want is not listed in the **Font Size** list, click in the **Font Size** box, type the desired number, and then press the **Enter** key.

   NOTE: You can also change the font size by clicking the **Increase Font Size** button A or **Decrease Font Size** button A in the **Font** group on the **Home** tab of the **Ribbon**.

Edit with WPS Office

Changing the Font Color and Highlighting Text

You can emphasize important text by changing the font color or applying highlighting.

To change the font color:

1. Select the text that you want to format.
2. On the **Home** tab, in the **Font** group, click the **Font Color** button to apply the most recently used color, or click the **Font Color** arrow and select a different color from the color palette (see Figure 24).

To highlight text:

1. Select the text that you want to highlight.
2. On the **Home** tab, in the **Font** group, click the **Text Highlight Color** button to apply the most recently used color, or click the **Text Highlight Color** arrow and select a different color from the color palette (see Figure 25).

   NOTE: You can remove a highlight from selected text by clicking the **Text Highlight Color** arrow, and then clicking **No Color** on the palette.

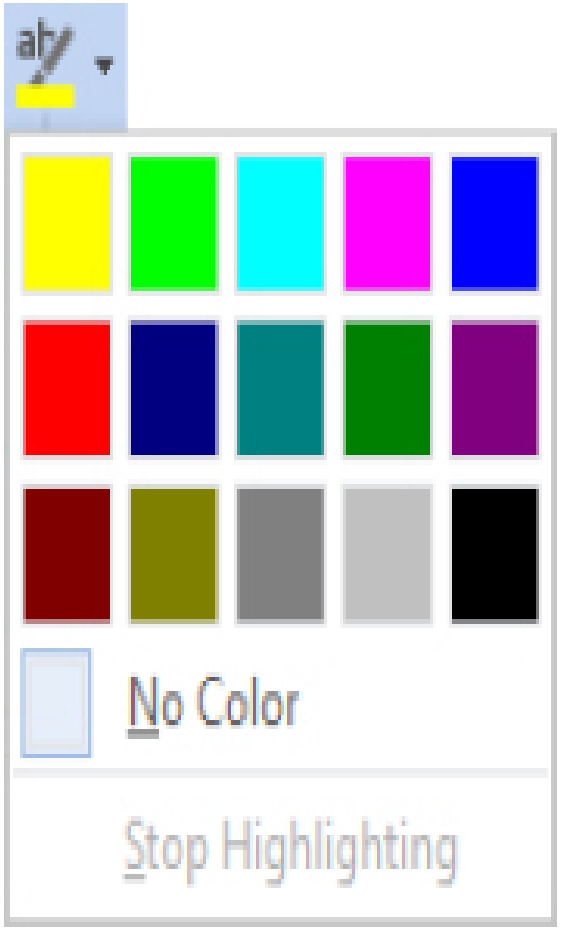

Figure 25 – Text Highlight Color Palette

Edit with WPS Office

Applying Font Styles and Effects

You can apply one or more font styles and effects to text. Font styles are attributes such as bold and italic; effects are special enhancements such as strikethrough and shadow (see Table 3).

Table 3 – Font Style and Effect Buttons

Name	Description
B Bold	Makes the selected text bold (**example**).
I Italic	Italicizes the selected text (*example*).
U Underline	Draws a line under the selected text (example). Click the arrow on the button to select the type of underline.
abc Strikethrough	Draws a line through the middle of the selected text (~~example~~).
x_2 Subscript	Creates small letters below the text baseline ($_{example}$).
x^2 Superscript	Creates small letters above the line of text (^{example}).
A Text Effects and Typography	Applies a visual effect (such as a shadow, glow, or reflection) to the selected text.
Aa Change Case	Changes the selected text to uppercase, lowercase, or other common capitalizations.

Edit with WPS Office

Clearing Formatting

You can remove all formatting from selected text, leaving only the plain text.

To clear formatting:

1. Select the text that has the formatting you want to clear.
2. On the **Home** tab, in the **Font** group, click the **Clear All Formatting** button .

Copying Formatting

You can copy the formatting of specific text and apply it to other text in the document. This can save you time and effort when multiple formats have been applied to text and you want to format additional text with all the same formats.

To copy formatting:

1. Select the text that has the formatting you want to copy.
2. On the **Home** tab, in the **Clipboard** group, click the **Format Painter** button . The mouse pointer changes to a paintbrush with an I-beam .
3. Select the text to which you want to apply the copied formatting.

   NOTE: If you want to apply the copied formatting to more than one area, double-click the **Format Painter** button instead of single-clicking it. This keeps the **Format Painter** active until you press the **Esc** key.

Edit with WPS Office

Formatting Paragraphs

Paragraph formatting refers to the layout of a paragraph on the page. You can change the look of a paragraph by changing its alignment, line spacing, and indentation, as well as the space before and after it. The *Paragraph* group on the *Home* tab of the *Ribbon* contains the most commonly used paragraph formatting commands (see Figure 26). You can also format paragraphs using the *Paragraph* dialog box which can be opened by clicking the dialog box launcher in the *Paragraph* group.

NOTE: To display or hide formatting marks such as spaces, tabs, and paragraph marks, click the **Show/Hide** button ¶ in the **Paragraph** group on the **Home** tab of the **Ribbon**.

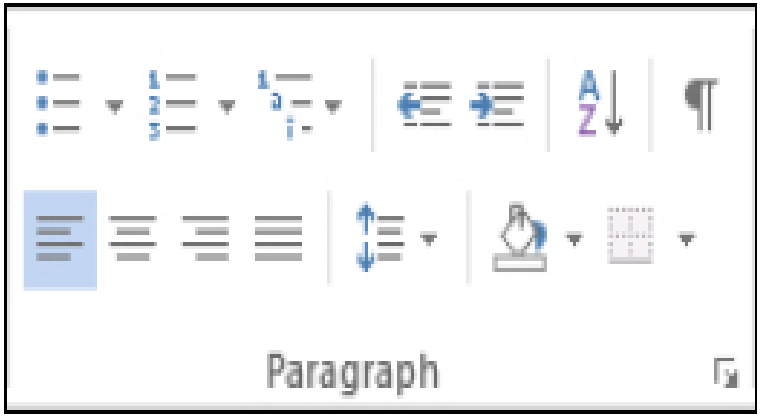

Figure 26 – Paragraph Group on the Home Tab

Edit with WPS Office

Changing Paragraph Alignment

Paragraph alignment refers to the position of each line of text in a paragraph between the left and right margins. The *Paragraph* group on the *Home* tab of the *Ribbon* includes four alignment buttons that can be used to quickly change the alignment of a paragraph (see Table 4).

Table 4 – Alignment Buttons

Name	Description
Align Left	Aligns the text at the left margin, producing a ragged right edge. This is the default alignment.
Center	Centers the text between the left and right margins, producing ragged left and right edges.
Align Right	Aligns the text at the right margin, producing a ragged left edge.
Justify	Aligns the text at both the left and right margins, producing even left and right edges. To accomplish this, Word adjusts the spacing between words, expanding or shrinking the spaces as needed.

To change the alignment of a paragraph:

1. Select the paragraph that you want to align.
2. On the **Home** tab, in the **Paragraph** group, click the desired alignment button.

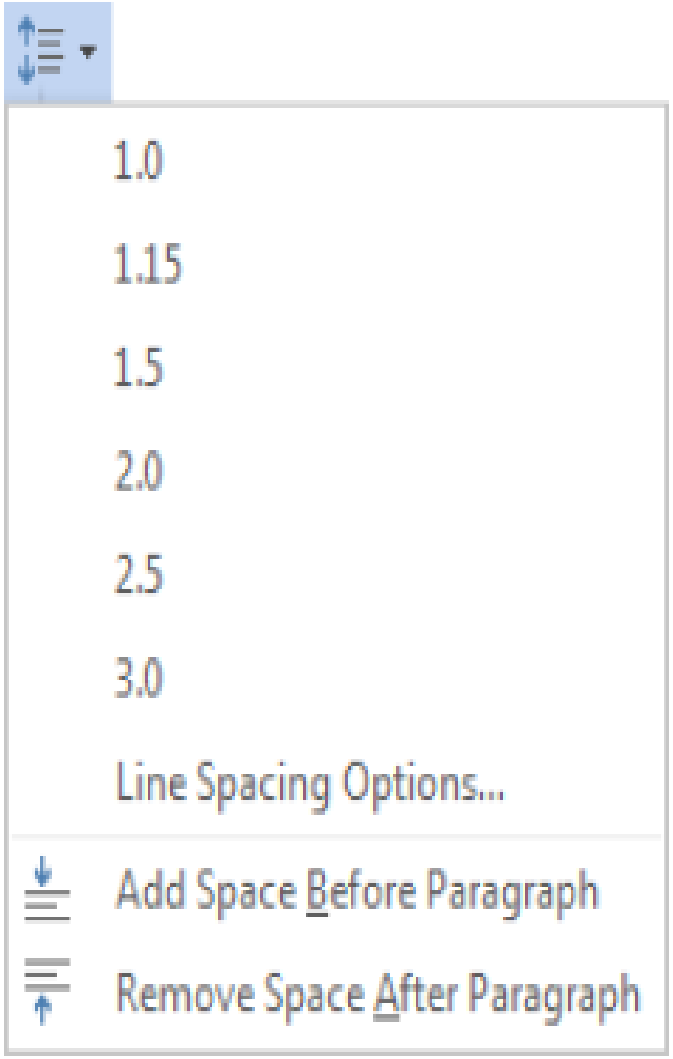
Edit with WPS Office

Changing Line and Paragraph Spacing

Line spacing determines the amount of space between the lines of text in a paragraph. Paragraph spacing determines the amount of space above and below a paragraph. In Word 2013, the default spacing is 1.08 lines and 8 points after each paragraph.

To change the line spacing within a paragraph:

1. Select the paragraph that you want to format.
2. On the **Home** tab, in the **Paragraph** group, click the **Line and Paragraph Spacing** button and select the desired line spacing (see Figure 27).



Edit with WPS Office

Figure 27 – Line and Paragraph Spacing Menu

To change the spacing before or after a paragraph:

1. Select the paragraph that you want to format.
2. On the **Page Layout** tab, in the **Paragraph** group, enter the desired value in the **Spacing Before** or **Spacing After** box (see Figure 28).

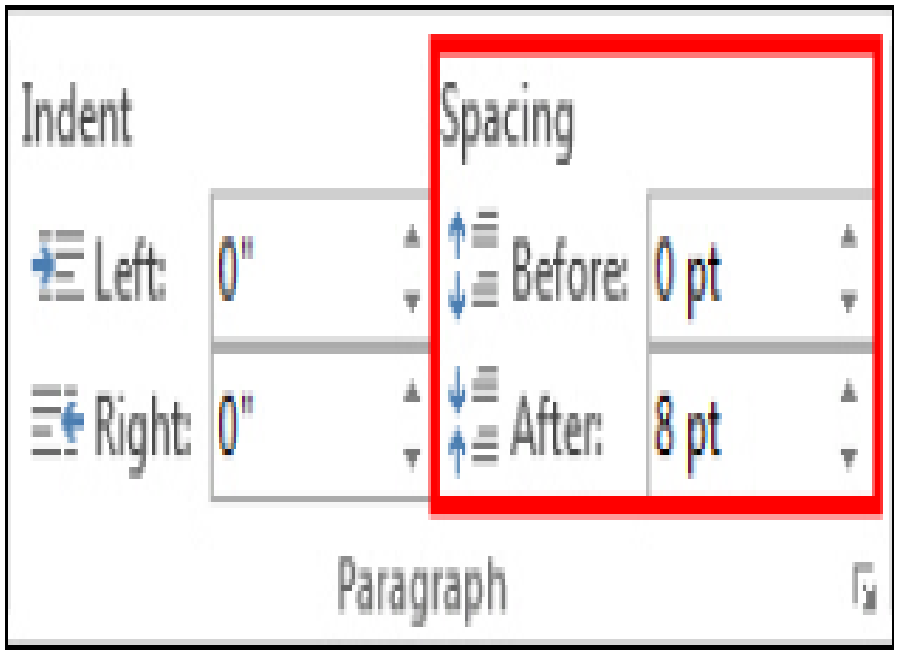


Figure 28 – Paragraph Group on the Page Layout Tab

Edit with WPS Office

Adding Borders and Shading

You can set apart text from the rest of the document by adding borders and shading. You can add borders to any side of the text or all sides to make a box.

To add borders:

1. Select the text to which you want to add borders.
2. On the **Home** tab, in the **Paragraph** group, click the **Borders** button to apply the most recently used border, or click the **Borders** arrow and select a different border from the menu (see Figure 32).

   NOTE: You can remove all borders from selected text by clicking the **Borders** arrow, and then clicking **No Border** on the menu.

To add shading:

1. Select the text to which you want to add shading.
2. On the **Home** tab, in the **Paragraph** group, click the **Shading** button to apply the most recently used color, or click the **Shading** arrow and select a different color from the color palette (see Figure 33).

   NOTE: You can remove shading from selected text by clicking the **Shading** arrow, and then clicking **No Color** on the palette.

Creating Bulleted and Numbered Lists

Bulleted and numbered lists make documents easier to read and understand. When you want to emphasize items in a list in no particular order, create a bulleted list. When you want to present a sequence of information or list items by order of importance, create a numbered list. You can add bullets or numbers to existing lines of text, or Word can automatically create bulleted or numbered lists as you type. You can also create a list that has multiple levels.

NOTE: If you move an item within a numbered list, Word will renumber the list to keep the items in the correct order.

To create a bulleted or numbered list:

1. Click in the document where you want to add the list.
2. On the **Home** tab, in the **Paragraph** group, click the **Bullets** button to start a bulleted list or **Numbering** button  to start a numbered list.
3. Type the text for the first list item.
4. Press the **Enter** key to add the next list item.
5. To end the list, press the **Enter** key twice.

   NOTE: You can change the bullet or number style by clicking the **Bullets** or **Numbering** arrow and selecting the desired option from the menu (see Figure 34 and Figure 35).

Edit with WPS Office

Edit with WPS Office

Figure 35 – Numbering Menu

To create a multilevel list:

1. Click in the document where you want to add the list.
2. On the **Home** tab, in the **Paragraph** group, click the **Multilevel List** button and select the desired style from the menu (see Figure 36).
3. Type the text for the first list item.
4. Press the **Enter** key to add the next list item.
5. Continue creating the list of items that are all at the same level.
6. To change the list level, do one of the following:
   - Press the **Tab** key to demote the list level.
   - Press **Shift+Tab** to promote the list level.
7. To end the list, position the insertion point at the end of the last list item, press the **Enter** key, and then press the **Delete** key.

Edit with WPS Office

To add text paragraph

- **Type the following text paragraph:**
- Upper respiratory tract infection (URI) represents the most common acute illness evaluated in the outpatient setting. URIs range from the common cold—typically a mild, self-limited, catarrhal syndrome of the nasopharynx—to life-threatening illnesses such as epiglottitis.
- Viruses account for most URIs. Appropriate management in these cases may consist of reassurance, education, and instructions for symptomatic home treatment.

Edit with WPS Office

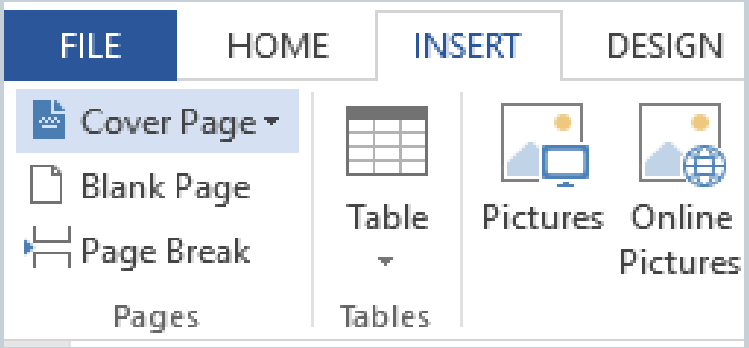
insert tab

- To add contents to your document (picture, table, shapes, charts and smart Art) you can use **insert tab** .
- The Insert Tab contains any additives you want to place in your document, including but not limited to: Tables, Picture, Online Picture, Headers, and Footers.

Edit with WPS Office

Cont…

- **Insert table:**
- To insert a table into your document, from > **Insert tab** and you will see the Tables group displayed as illustrated.
- Clicking on the **TABLE** option, you will see the following:
  - When you click table,



Edit with WPS Office

Cont…

- move the mouse pointer over the cells displayed in the drop down you will see that a preview version of the table is displayed within your document
- Here we select 4x3 this mean (4 columns, 3 rows)
